

15% Increase in Labour Productivity
High-mix, low-volume manufacturer
ROI of 4:1

The Challenge

BACKGROUND

This high-mix, low-volume manufacturer supplies custom parts to several industries. After 15 years in business and continued growth, they were experiencing losses in production time, space-constraints, and increased conflict withing the management team.

RESULTS

Labour productivity improved by 15%, resulting in an immediate increase in production capacity.

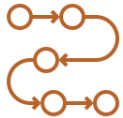

Improved **Inventory** management processes, resulting in a **6% savings** in annual inventory carrying costs.

The Solution

Conducted an in-depth operational efficiency assessment.

Facilitated the documentation and improvement of key processes.

Conducted a detailed inventory analysis and developed new inventory management processes.

Implemented an ongoing improvement routine to accomplish additional improvements.

Implemented improved use of system data and internal communications.
